We Guarantee "Made in the USA" from Formulation to Fulfillment and Minimize Paper Use whenever possible. No Animal Testing. Bio Degradable.

100%
NON-TOXIC

Makes You Wonder

Continued use of synthetic pesticides has caused insects to evolve and develop resistance to the products we relied on to protect our children, pets, and living environments. It's also very TOXIC. Pesticides are absorbed through the skin, by ingestion, or by simply breathing.

Products such as Topical Flea & Tick controls, DEET, and countless Pesticides impose serious health & environmental risks. They are widely used on and around animals and children, who have the highest risk of exposure. Pesticides are known to cause birth defects, cancer and gene mutations in both. Exposure is linked to Autism, ADHD, Cancer and Alzheimer's. "Safe" vet prescribed and OTC flea controls are responsible for illness and death of countless animals' world wide.

Even pesticides the EPA approves for general use are labeled unsafe for animals, humans, and beneficial insects. Fertilizer and pesticide run off pollutes water resources, destroying our ecosystem.

So what do we use? Until recently, there weren't any alternatives to these traditional products. Now, there is WONDERCIDE. It's like pesticide, but wonderfully, not.

How Wondercide Works

We'll make it simple. All insects breathe through their bodies. The aroma of Cedar Oil impairs the pheromone receptors of non beneficial insects. If no escape is possible, they suffocate and die. Wondercide formulation also dissolves the insect eggs & larvae. The aroma creates a barrier of re-entry when applied on a regular basis. Treat all areas with Wondercide products for complete chemical free pest control. That's it!
