

Wondercide: Irrigation Systems Can Now Provide the Ultimate in Mosquito, Flea, No-See-Um and Grub Control

Delivery of Cedar Oil formulated Insect Control Agent EcoTreat Pro via a new or existing Irrigation or Mobile Sprinkler System provides Mosquito Avoidance while defining off limit areas for flying insects and Soil Borne Pests. The injection of EcoTreat Pro concentrate into the water stream destined for the sprinkler heads will deliver the Cedar Oil Control Agent to designated bug free areas. The Chemical Free Solution is Safe to Children and Pets.

April 10, 2008 – Stephanie Boone of Wondercide LLC recently announced the introduction of the Pestigator Insect Control System as a delivery method for natural pest control. Manufactured with a 5 year warranty by Cedarcide Industries, this water stream injection technology is the ultimate in Insect Control for Residential, Commercial, Governmental and Agricultural industries. Wondercide has successfully formulated an insect control substance that delivers Cedar Oil into a water stream in nano size molecules. The Pestigator is a water driven injection pump that is instrumental in delivery of Wondercide EcoTreat Pro concentrate into the water stream of irrigation and sprinkler heads, providing disbursement to all subject areas. The Pestigator is adjustable in ranges of 1000:1 to 4000:1 providing a delivery rate of the Cedar Oil Concentrate in variable amounts dictated by the landscape and insect control objective.

The Pestigator is instrumental in control of Mosquitoes, Flies, Fleas, No-See-Um, Chiggers, Ticks, Chinch Bugs, Grub Worms, Mites, Mole Crickets, Earwigs, Slugs, Snails, Caterpillars, Beetles, June Bugs, May Bugs, Root Maggots, Army Worms, Weevils, Wire Worms, Ants and Termites. It will eliminate Powdery Mildew and Scale as well as Aphids and numerous other plant pests. As an Anti-Microbial it will trigger the demise of lawn fungal organisms causing Brown Patch and Take All Patch. The high carbon component of Cedar Oil will promote microbial activity in the soil that stimulates grass and plant growth.

The lingering aroma of Cedar Oil is a pheromone interruption agent that impairs the mental capacity of non-beneficial arthropod. Penetration of substance and plant life by Cedar Oil is instrumental in masking the kairomone of all matter, making it undetectable by the insects sensing device better known as the Octopomine Neuro Receptor. EcoTreat Pro applied with the Pestigator will dissolve all insect egg and larvae that comes in contact with the solution. Next Generation insects are eliminated by disruption of the Egg Layer Cycle. The aroma of Cedar Oil subsequently creates a Barrier of Entry making treated areas off limits to pests.

By interruption of the Grub Worm food chain, EcoTreat Pro will eliminate Moles, Armadillo, Wild Hogs and other insect scavengers from destroying golf course and homeowners property. The aroma of Cedar Oil is a Snake deterrent and EcoTreat Pro treated areas will be designated off limits for Pheromone driven and Heat Seeking Venomous Snakes. The exodus of insects from the treated area will deter Spiders and Garden Variety Snakes from the area by interruption of their food chain.

Pestigator nano technology is an inexpensive and sensible alternative to Misting Systems and other insect control devices. Misting System Technology using Pyrethroids is acknowledged as an unsafe and a publicly incorrect insect control protocol by the EPA.

Using Pestigator technology, Installation of piping and nozzles throughout the treatment area is not necessary as delivery of the solution is predetermined by location and type of sprinkler head. Total coverage is obtained where Misting System and other technology provides limited coverage. Unlike the estrogen mirroring and carcinogenic Pyrethroid Toxins used in Misting Systems, EcoTreat Pro is a Cedar Oil and Ethyl Lactate formulated concentrate that is classified as a Minimum Risk Pesticide by the EPA. It is safe to use around Children and Pets and poses no threat to Human or Animal life. Repeat usage enhances soil conditions rather than depleting them. Phytotoxic plant burn and structure yellowing is not possible. Periodic over usage is recommended for control of soil borne insects and the eradication of insect egg and larvae.

Liquid Fertilizers can also be delivered with the Pestigator system.

The Pestigator utilizes the existing control panel and Zone Selector of multi station new or existing irrigation systems. The Pestigator is located forward of the water delivery stream dedicated to each area. It can be activated automatically or with a manual control. Water is diverted through the Pestigator injection pump which meters and injects the EcoTreat Pro Concentrate into the water stream. A one to two minute delivery time is sufficient to satisfy the necessary delivery of the EcoTreat Pro Cedar Oil Control Solution. Subsequent 1 - 2 minute treatments are predicated on the residual and can vary from 1 to 7 days. There are no physical acreage limitations to the Pestigator and its application to Residential, Agricultural and Golf Course areas.

The Pestigator can also be used as a stationery or wall mount unit supplied with an auxiliary water supply from the local spigot. Water streams in route via garden hose to spray nozzles or movable sprinklers can be used to deliver the EcoTreat Pro to any areas desired.

Pestigator Injection System packages are available in price ranges of 1995.00 installed for manual systems and 2495.00 installed for fully automatic systems. Uninstalled prices range from \$1300 dollars to \$1900 dollars can be purchased directly from Wondercide by Homeowners or installers. Units can easily be installed by the property owner or a local Irrigation or plumbing company. Complete installation instructions and how to video are included.

For more information on the PESTIGATOR go to www.Wondercide.com or call 877-TX-ORGANIC. Contact Wondercide for an installer nearest you.

EcoTreat Pro Concentrate is sold in quarts and 1 Gallon Containers or in case lots of 4. EcoTreat Pro can be used in all Misting Systems as an inexpensive alternative to toxic Pyrethrum and Pyrethrin additives. EcoTreat Pro is compatible with all water stream Injection Systems. No applicators license is required due to the EPA exemption status. Wholesale inquiries are welcome.
